About this document

Target audience
This document is intended for users and technical staff at banks which access the RTGS systems SIC and euroSIC via SWIFT, and direct debit procedures.

Purpose
This handbook describes how to process payments and direct debits via SWIFT. In it, reference is made to the current SIC/euroSIC User Manual and to the SWIFT User Handbook. These handbooks are essential supplements to this document, especially in relation to how messages are constructed and further information on the SWIFT FIN platform.

Examples
The examples in this manual refer alternately to SIC and to euroSIC. All the examples given are entirely fictional.

Amendment record
All amendments to this document will be listed in an amendment record table showing the date of the amendment, a brief description and a reference to the relevant sections.

Associated documents
Important supplementary information accompanying this handbook can be found in the following documents:

- SIC/euroSIC User Manual
  Sections A and B of the SIC/euroSIC User Manual contain basic information about the SIC/euroSIC platform with which financial institutions users should be familiar.

- SWIFT User Handbook
  The SWIFT User Handbook contains further information about SWIFT messages and the SWIFT FIN platform.

- Technical rules and regulations
  The Technical Rules and Regulations explain the regulations for how to use SIC and euroSIC. It is therefore strongly recommended that sections 2 and 4 in particular, and Appendices I, II and III, are read carefully.

- Forms
  For further information on the standard forms used in Switzerland, for example deposit slips (Einzahlungsscheine ES) or deposit slips with reference numbers (ESR), please refer to Appendix I-2 of the Technical Rules and Regulations and to the Design Guidelines from PostFinance (441.03).

- LSV'/BDD Guidelines for financial institutions
  The LSV'/BDD Guidelines for financial institutions contain bank-specific and technical processing details about the direct debit procedure.

Section A  Overview

A.1  The service

SIX Interbank Clearing offers banks the opportunity to take part in the RTGS systems of SIX Interbank Clearing (SIC/euroSIC) and in and in the direct debit procedures LSV+/BDD directly via SWIFT and Internet. Via SWIFT financial institutions can send payments, receive payments and other messages and make queries.

A financial institution can use its existing SWIFT infrastructure to send or receive messages.

For queries, SIX Interbank Clearing offers a cash management service via Web Applications, providing online access via Internet to the relevant service (SIC or euroSIC). To guarantee the greatest possible level of security for the user, this is achieved using password combinations together with a SmartCard with electronic certificate.
A.2 Basic principles

A.2.1 Payment process

A financial institution sends the SWIFT message to SIX Interbank Clearing. Provided that the payment complies with SWIFT FIN validation criteria, the payment reaches SIX Interbank Clearing. Our system checks whether all the relevant fields for conversion into SIC format are available and correct.

If all conditions are met, the payment message is converted from SWIFT into SIC standard and forwarded to the relevant system (SIC or euroSIC). If a message cannot be forwarded to the relevant system, an error message is returned to the sending BIC.

If everything is in order, the payment joins the waiting queue. Settlement is made provided that there are sufficient funds in the settlement account. The settlement process runs in a cycle through all settlement accounts, checking each time whether the balance is sufficient for settlement of the next payment from the waiting queue. Only payments with a current value date go into this process.

Following final settlement, the payment is delivered to the recipient.

A.2.2 Message types

A.2.2.1 Permitted SWIFT message types

The following SWIFT message types are permitted:

<table>
<thead>
<tr>
<th>Message type</th>
<th>Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>SWIFT MT103</td>
<td>Single Customer Credit Transfer</td>
</tr>
<tr>
<td>SWIFT MT104</td>
<td>Direct Debit and Request for Debit Transfer Message</td>
</tr>
<tr>
<td>SWIFT MT202</td>
<td>General Financial Institution Transfer</td>
</tr>
<tr>
<td>SWIFT MT202COV</td>
<td>General Financial Institution Transfer</td>
</tr>
<tr>
<td>SWIFT MT192</td>
<td>Request for Cancelation</td>
</tr>
<tr>
<td>SWIFT MT292</td>
<td>Request for Cancelation</td>
</tr>
</tbody>
</table>

SIX Interbank Clearing accepts and processes all permitted SWIFT messages which it receives from a financial institution. It is the responsibility of the financial institution to take internal steps as appropriate if it wishes to restrict the message types.

A.2.2.2 Submitting payments via SWIFT and SIC/euroSIC platform interface

Financial institutions can also use SWIFT to supplement an existing SIC/euroSIC platform interface. Examples:

a) A financial institution only sends cross-border payments via SWIFT, all other payments via the SIC/euroSIC platform interface.

b) A financial institution obtains only MT950 by SWIFT, all other messages via the SIC/euroSIC platform interface.
A.2.2.3 Names of message types

In SIC/euroSIC, a distinction is made between different types of messages. In this document, SWIFT message types, e.g. MT104 (Direct Debit and Request for Debit Transfer Message) are always referred to together with the corresponding SIC/euroSIC message type for that specific case: MT104/D10 (MT D10 is the corresponding message for direct debits in SIC/euroSIC). The idea is to make it easier for participants using remoteGATE to communicate with banks which use a SIC/euroSIC platform interface. This could happen if a partner bank reports that they would like to send a credit advice using message type SIC A10.

A.2.3 BIC of SIX Interbank Clearing

SIX Interbank Clearing as a clearing house participates in SWIFT using the following BICs:

- TKZHCHZZ for production
- TKZHCHZ0 for test

A.2.4 SWIFT/SIC standards

SIC standards are based on the standards for SWIFT FIN, and in principle all relevant SWIFT releases are incorporated.

The two standards are therefore compatible in principle. In rare cases, it may happen that some data from SIC/euroSIC cannot be completely converted into SWIFT. See also section B.2.

Certain SWIFT message types, e.g. MT103, may correspond to different SIC/euroSIC message types from one case to another: MT103/A10 (customer payment), MT103/A11 (extended customer payment) or MT103/A15 (VESR payment). Further details about the possible SIC message types can be found in section D 4 of the SIC/euroSIC User Manual.

Summary of message types:

<table>
<thead>
<tr>
<th>SIC message type</th>
<th>remoteGATE message type</th>
</tr>
</thead>
<tbody>
<tr>
<td>A10</td>
<td>MT103/A10</td>
</tr>
<tr>
<td>A11</td>
<td>MT103/A11</td>
</tr>
<tr>
<td>A15</td>
<td>MT103/A15</td>
</tr>
<tr>
<td>B10</td>
<td>MT202/B10</td>
</tr>
<tr>
<td>B11</td>
<td>MT202/B11</td>
</tr>
<tr>
<td>B12</td>
<td>MT202 COV/B12</td>
</tr>
<tr>
<td>H70</td>
<td>MTn92/H70</td>
</tr>
<tr>
<td>D10</td>
<td>MT104/D10</td>
</tr>
</tbody>
</table>

A.2.5 Fields not listed

Any SWIFT fields which are not listed in this document are not permitted. If such fields are used, this may lead to rejects, or the content may be ignored.
A.2.6 Using BIC/BC numbers

To identify a SIC or euroSIC participant, it is recommended that the relevant BC (bank clearing) number is used instead of the BIC. Calling up BC numbers is possible online, and the bank master data is also available online as an Excel file. In principle, it is possible to address the SIC/euroSIC participant who is to be credited using the BIC, which will be converted into the relevant BC number. Some banks use a BIC for more than one branch or bank. If, as a result, the same BIC is used for more than one BC number, the BC number of the head office (headquarters) will be used. In such cases, using the BIC can mean that there is a delay in crediting the payment to the receiving customer. The name of the branch to be credited can be omitted in field 72 (e.g. /ACC/Your Branch in 5000 Seldwyla).

It is recommended that the IBAN is used wherever possible, see also section A.2.9.

A.2.7 Incorrect BC number/wrong BIC

Payments are rejected which have

- BC numbers which do not or no longer exist
- BICs to which no BC number can be attributed
- BICs for which the relevant BC number is concatenated

A.2.8 Incorrect information in fields, and repairs

SIX Interbank Clearing does not carry out any repairs. Messages which cannot be properly converted or automatically processed will be rejected by the respective system (SIC or euroSIC) and, after being corrected, must be sent again with a new reference number.

A.2.9 Return

Any return of the payment by the beneficiary financial institution due to the absence of required information (e.g. the recipient is not known) must be made directly to the ordering financial institution in accordance with the Technical Rules and Regulations (appendix I-8). See also section B.8 of this handbook.

A.2.10 Interface Bank – Customer

In principle it is assumed that bank customers will deliver their credit transfers and direct debits using the bank’s own channels at their financial institution. The bank ensures the required compatibility with SIC and euroSIC. If customers wish they can submit direct debits via payCOMweb. Further information is available on the website www.lsv.ch.
A.3  Going into operation for new participants

This section describes how to put the system into operation for financial institutions which are not yet SIC/euroSIC participants.

A.3.1  Requirements SIC/euroSIC

The following conditions are required:

- Application for participation
- SWIFT production and test system
- Sight deposit contract with the relevant system manager (SNB/SECB)
- Supplementary or service agreement with SIX Interbank Clearing for the appropriate system
- Closed User Group Registration (through SWIFT)
- Access to the SIX Interbank Clearing Extranet
- SWIFT RMA
- Completed test procedure and authorization from SIX Interbank Clearing
- Publication in the bank clearing mutation circular
- Productive access to the Web application remoteGATE

A.3.1.1  SIC/euroSIC documentation

The following documentation is to be provided by the financial institution:

<table>
<thead>
<tr>
<th>Form (SIC/euroSIC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application for participation</td>
</tr>
<tr>
<td>Web applications remoteGATE</td>
</tr>
<tr>
<td>Person in charge of service</td>
</tr>
<tr>
<td>Debit authorization for SIC</td>
</tr>
<tr>
<td>Debit authorization for euroSIC</td>
</tr>
<tr>
<td>SWIFT – CUG confirmation</td>
</tr>
<tr>
<td>SWIFT RMA</td>
</tr>
<tr>
<td>Online form: BC Segment (Test/Production)</td>
</tr>
<tr>
<td>Online form: Settlement Segment (Test/Produc-</td>
</tr>
</tbody>
</table>

A.3.2  SIC/euroSIC master data

SIX Interbank Clearing requires the relevant master data sheets (BC Segment/Settlement Segment) at least fifteen days before the start of test or production operation. These can be filled in by the financial institution on the Extranet and submitted online. It is not possible for test or production operation to begin without the correct master data. For the online forms BC Segment (Test/Production) and Settlement Segment (Test/Production), a data entry aid is available.
A.3.3 Timing

The average lead time before productive operation can begin is 6 weeks from the receipt of the completed documentation at SIX Interbank Clearing. Experience shows this to be the average length of time, but it depends among other things on whether all the tests are successful. In some cases the process may take longer. A financial institution states its preferred date for commencing production when it submits its application. This is confirmed or adjusted by SIX Interbank Clearing. It is only possible for this date to be altered to a limited extent, because that then affects the timing for other financial institutions. SIX Interbank Clearing therefore reserves the right to refuse requests to alter the date.

A.3.4 Extranet

The Internet and the password-protected Extranet (login on www.six-interbank-clearing.com) is the information platform for SIX Interbank Clearing customers. All the important information is available there, in particular handbooks, the Technical Rules and Regulations and circulars. The financial institution will automatically receive an e-mail alerting it to new information on the Extranet.

The entire registration process has to be carried out on the Internet/Extranet.

The financial institution appoints someone to be responsible for the Extranet. This person can register additional users of the Extranet. The people registered there are responsible for ensuring that information from SIX Interbank Clearing is disseminated in-house.

A.3.5 Responsibility for services

The person in charge of services is the point of contact for a particular service. A financial institution appoints one person for each service, who may be responsible for more than one service.

A.3.6 SWIFT Closed User Group

SIX Interbank Clearing is a SWIFT participant in the PCH (Payments Clearing House) category. Financial institutions must register their participation in the CUG (Closed User Group) online with SWIFT. SWIFT requires about two to three weeks to process this registration. SWIFT informs the financial institution directly when it has been included in the CUG. Details of the registration are to be found in Section G.

A.3.7 SWIFT test system

For the tests, the participant must make available a functioning SWIFT acceptance test environment including their own SWIFT test BIC. The sending of messages using a production BIC to the SIX Interbank Clearing test system and vice versa is not possible. For test purposes, the SWIFT test BIC of the financial institution is required. SIX Interbank Clearing must be informed immediately if a financial institution has no SWIFT test environment in which to send and receive payments.
The new participant must inform SIX Interbank Clearing immediately if
a) they have no SWIFT test environment in which to send and receive messages.
b) they are unable to test all the messages prescribed in the acceptance testing
process.

SIX Interbank Clearing makes adequate credit for test purposes available every day at
the start of clearing. Apart from the different clearing times (approx. 12.00 CET), the
test system offers the same conditions as the production system.

A.3.8 SWIFT Relation Management Authorisation (RMA)

RMA is carried out shortly before test and production operation begin. To do this, SIX
Interbank Clearing will contact the bank.

A.3.9 Web application remoteGATE

The security media ordered for online access (Web application remoteGATE) will be
produced and tested by SIX Interbank Clearing and if possible sent to the respective
persons within two weeks. These security media will be needed even in test opera-
ton.

A.3.10 Debit authorization for SIC/euroSIC

SIX Interbank Clearing sends invoices by direct debit. Each financial institution must
therefore provide a debit authorization when registering. It is not possible to go into
production without a debit authorization.

A.3.11 Tests before production starts

Every financial institution must complete an acceptance test before production can
begin. During this time, the customers can familiarize themselves with SIX Interbank
Clearing's systems and acquire the necessary knowledge about, for example, correct
formatting of payments. SIX Interbank Clearing makes its test environment available
for this purpose.

The test consists of a so-called compulsory part and an "optional" part. The voluntary
tests serve to ensure that financial institutions are able to produce all the required
message types. Details on the tests can be found in Section F. It is recommended that
all the examples shown there are tested.

The test process is supported by the Operations Center. This should therefore be notified
before testing begins, by phone +41 58 399 4200 or by e-mail to operations@six-
group.com.
A.3.12 Bank clearing mutation circular

Upon successful completion of the test procedure, SIX Interbank Clearing will include the financial institution in the next bank clearing mutation circular. This is sent out to the system participants on the 20th of each month, informing them about the new remoteGATE participant joining from the first of the following month.

Inclusion in the bank clearing mutation circular is confirmed by SIX Interbank Clearing by the 10th of the preceding month.

A financial institution cannot be included in a bank clearing mutation circular without having successfully completed the acceptance testing.

A.3.13 Start of production

Once the bank has been included in the bank clearing mutation circular, the financial institution is obliged to start production on the date in question.

It is not possible to start production without being published in the bank clearing mutation circular.

A.3.14 Example of the procedure for customer connection

A.3.14.1 Responsibilities of SIX Interbank Clearing

<table>

A.4 Going into operation for the additional of payments/direct debits submission via SWIFT FIN

This section describes how to go into operation for SIC/euroSIC participants with a SIC/euroSIC platform interface who – in addition to sending SIC messages – also want to send SWIFT FIN to SIC/euroSIC.

A.4.1 Requirements SIC/euroSIC

The following conditions are required:

- Application for participation
- Participation in the SIC/euroSIC system
- SWIFT production and test system
- Closed User Group Registration
- SWIFT RMA
- Completed test procedure and authorization from SIX Interbank Clearing

A.4.1.1 SIC/euroSIC documentation

The following documentation is to be provided by the financial institution:

<table>
<thead>
<tr>
<th>Form (SIC/euroSIC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application for participation</td>
</tr>
<tr>
<td>Person in charge of service</td>
</tr>
<tr>
<td>SWIFT – CUG confirmation</td>
</tr>
<tr>
<td>SWIFT RMA</td>
</tr>
<tr>
<td>Online form: BC Segment (Test/Production)</td>
</tr>
<tr>
<td>Online form: Settlement Segment (Test/Production)</td>
</tr>
</tbody>
</table>

A.4.2 SIC/euroSIC master data

SIX Interbank Clearing requires the relevant master data sheets (BC Segment/Settlement Segment) at least fifteen days before the start of test or production operation. These can be filled in by the financial institution on the Extranet and submitted online. It is not possible for test or production operation to begin without the correct master data. For the online forms BC Segment (Test/Production) and Settlement Segment (Test/Production), a data entry aid is available.

A.4.3 Timing

The average lead time before productive operation can begin is 6 weeks from the receipt of the completed documentation at SIX Interbank Clearing. Experience shows this to be the average length of time, but it depends among other things on whether all the tests are successful. In some cases the process may take longer. A financial institution states its preferred date for commencing production when it submits its application. This is confirmed or adjusted by SIX Interbank Clearing. It is only possible for this date to be altered to a limited extent, because that then affects the timing for
other financial institutions. SIX Interbank Clearing therefore reserves the right to refuse requests to alter the date.

### A.4.4 SWIFT Closed User Group

SIX Interbank Clearing is a SWIFT participant in the PCH (Payments Clearing House) category. Financial institutions must register their participation in the CUG (Closed User Group) online with SWIFT. SWIFT requires about two to three weeks to process this registration. SWIFT informs the financial institution directly when it has been included in the CUG. Details of the registration are to be found in Section G.

### A.4.5 SWIFT test system

For the tests, the participant must make available a functioning SWIFT acceptance test environment including their own SWIFT test BIC. The sending of messages using a production BIC to the SIX Interbank Clearing test system and vice versa is not possible. For test purposes, the SWIFT test BIC of the financial institution is required.

The new participant must inform SIX Interbank Clearing immediately if

a) they have no SWIFT test environment in which to send and receive messages.

b) they are unable to test all the messages prescribed in the acceptance testing process.

SIX Interbank Clearing makes adequate credit for test purposes available every day at the start of clearing. Apart from the different clearing times (approx. 12.00 CET), the test system offers the same conditions as the production system.

### A.4.6 SWIFT Relation Management Authorisation (RMA)

RMA is carried out shortly before test and production operation begin. To do this, SIX Interbank Clearing will contact the bank.

### A.4.7 Tests before production starts

Every financial institution must complete an acceptance test before production can begin. During this time, the customers can familiarise themselves with SIX Interbank Clearing’s systems and acquire the necessary knowledge about, for example, correct formatting of payments. SIX Interbank Clearing makes its test environment available for this purpose.

The test consists of a so-called compulsory part and an "optional" part. The voluntary tests serve to ensure that financial institutions are able to produce all the required message types. Details on the tests can be found in Section F. It is recommended that all the examples shown there are tested.

The test process is supported by the Operations Center. This should therefore be notified before testing begins, by phone +41 58 399 4200 or by e-mail to operations@six-group.com.
A.4.8 Start of production

Having successfully completed the acceptance testing, the financial institution can begin the migration. This must be done by arrangement with the Operations Center and allowing for the usual lead time for mutations.
A.5 Going into operation for migration to remoteGATE

This section describes how to go into operation for SIC/euroSIC participants with a SIC/euroSIC platform interface who want to convert it to remoteGATE.

A.5.1 Requirements

The following conditions are required:

- Application for participation
- Participation in the SIC/euroSIC system
- SWIFT production and test system
- Closed User Group Registration
- SWIFT RMA
- Completed test procedure and authorization from SIX Interbank Clearing

A.5.1.1 SIC/euroSIC documentation

The following documentation is to be provided by the financial institution:

<table>
<thead>
<tr>
<th>Form (SIC/euroSIC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application for participation</td>
</tr>
<tr>
<td>Person in charge of service</td>
</tr>
<tr>
<td>SWIFT – CUG confirmation</td>
</tr>
<tr>
<td>SWIFT RMA</td>
</tr>
<tr>
<td><strong>Online form</strong>: BC Segment (Test/Production)</td>
</tr>
<tr>
<td><strong>Online form</strong>: Settlement Segment (Test/Production)</td>
</tr>
</tbody>
</table>

A.5.2 SIC/euroSIC master data

SIX Interbank Clearing requires the relevant master data sheets (BC Segment/Settlement Segment) at least fifteen days before the start of test or production operation. These can be filled in by the financial institution on the Extranet and submitted online. It is not possible for test or production operation to begin without the correct master data. For the online forms BC Segment (Test/Production) and Settlement Segment (Test/Production), a data entry aid is available.

A.5.3 Timing

The average lead time before productive operation can begin is 6 weeks from the receipt of the completed documentation at SIX Interbank Clearing. Experience shows this to be the average length of time, but it depends among other things on whether all the tests are successful. In some cases the process may take longer. A financial institution states its preferred date for commencing production when it submits its application. This is confirmed or adjusted by SIX Interbank Clearing. It is only possible for this date to be altered to a limited extent, because that then affects the timing for other financial institutions. SIX Interbank Clearing therefore reserves the right to refuse requests to alter the date.
A.5.4 Responsibility for services

The person in charge of services is the point of contact for a particular service. A financial institution appoints one person for each service, who may be responsible for more than one service.

A.5.5 SWIFT Closed User Group

SIX Interbank Clearing is a SWIFT participant in the PCH (Payments Clearing House) category. Financial institutions must register their participation in the CUG (Closed User Group) online with SWIFT. SWIFT requires about two to three weeks to process this registration. SWIFT informs the financial institution directly when it has been included in the CUG. Details of the registration are to be found in Section G.

A.5.6 SWIFT test system

For the tests, the participant must make available a functioning SWIFT acceptance test environment including their own SWIFT test BIC. The sending of messages using a production BIC to the SIX Interbank Clearing test system and vice versa is not possible. For test purposes, the SWIFT test BIC of the financial institution is required.

The new participant must inform SIX Interbank Clearing immediately if
a) they have no SWIFT test environment in which to send and receive messages.
b) they are unable to test all the messages prescribed in the acceptance testing process.

SIX Interbank Clearing makes adequate credit for test purposes available every day at the start of clearing. Apart from the different clearing times (approx. 12.00 CET), the test system offers the same conditions as the production system.

A.5.7 SWIFT Relation Management Authorisation (RMA)

RMA is carried out shortly before test and production operation begin. To do this, SIX Interbank Clearing will contact the bank.

A.5.8 Tests before production starts

Every financial institution must complete an acceptance test before production can begin. During this time, the customers can familiarise themselves with SIX Interbank Clearing's systems and acquire the necessary knowledge about, for example, correct formatting of payments. SIX Interbank Clearing makes its test environment available for this purpose.

The test consists of a so-called compulsory part and an "optional" part. The voluntary tests serve to ensure that financial institutions are able to produce all the required message types. Details on the tests can be found in Section F. It is recommended that all the examples shown there are tested.

The test process is supported by the Operations Center. This should therefore be notified before testing begins, by phone +41 58 399 4200 or by e-mail to operations@six-group.com.
A.5.9 Start of production

Having successfully completed the acceptance testing, the financial institution can begin the migration. This must be done by arrangement with the Operations Center and allowing for the usual lead time for mutations.
A.6 Going into operation for obtaining SWIFT MT950

This section describes how to go into operation for SIC/euroSIC participants with a SIC/euroSIC platform interface who carry out reconciliation in SIC/euroSIC via SWIFT MT950.

A.6.1 Requirements SIC/euroSIC

The following conditions are required:
- Application for participation
- SWIFT production and test system
- Closed User Group Registration (through SWIFT)
- SWIFT RMA

A.6.1.1 SIC/euroSIC documentation

The following documentation is to be provided by the financial institution (to be checked/supplemented by the Operations Center):

<table>
<thead>
<tr>
<th>Form (SIC/euroSIC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application for participation</td>
</tr>
<tr>
<td>Person in charge of service</td>
</tr>
<tr>
<td>SWIFT RMA</td>
</tr>
<tr>
<td>SWIFT – CUG Registration (Test/Live)</td>
</tr>
<tr>
<td>Online form: Delivery Segment (Test/Production)</td>
</tr>
</tbody>
</table>

A.6.2 SIC/euroSIC master data

SIX Interbank Clearing requires the relevant master data sheets (BC Segment/Settlement Segment) at least fifteen days before the start of test or production operation. These can be filled in by the financial institution on the Extranet and submitted online. It is not possible for test or production operation to begin without the correct master data. For the online forms BC Segment (Test/Production) and Settlement Segment (Test/Production), a data entry aid is available.

A.6.3 Timing

The average lead time before productive operation can begin is 6 weeks from the receipt of the completed documentation at SIX Interbank Clearing. Experience shows this to be the average length of time, but it depends among other things on whether all the tests are successful. In some cases the process may take longer. A financial institution states its preferred date for commencing production when it submits its application. This is confirmed or adjusted by SIX Interbank Clearing. It is only possible for this date to be altered to a limited extent, because that then affects the timing for other financial institutions. SIX Interbank Clearing therefore reserves the right to refuse requests to alter the date.
A.6.4 SWIFT Closed User Group

SIX Interbank Clearing is a SWIFT participant in the PCH (Payments Clearing House) category. Financial institutions must register their participation in the CUG (Closed User Group) online with SWIFT. SWIFT requires about two to three weeks to process this registration. SWIFT informs the financial institution directly when it has been included in the CUG. Details of the registration are to be found in Section G.

A.6.5 SWIFT test system

For the tests, the participant must make available a functioning SWIFT acceptance test environment including their own SWIFT test BIC. The sending of messages using a production BIC to the SIX Interbank Clearing test system and vice versa is not possible. For test purposes, the SWIFT test BIC of the financial institution is required.

The new participant must inform SIX Interbank Clearing immediately if
a) they have no SWIFT test environment in which to send and receive messages.
b) they are unable to test all the messages prescribed in the acceptance testing process.

SIX Interbank Clearing makes adequate credit for test purposes available every day at the start of clearing. Apart from the different clearing times (approx. 12.00 CET), the test system offers the same conditions as the production system.

A.6.6 SWIFT Relation Management Authorisation (RMA)

RMA is carried out shortly before test and production operation begin. To do this, SIX Interbank Clearing will contact the bank.

A.6.7 Tests before production starts

The financial institution checks whether it can carry out reconciliation correctly using SWIFT MT950.

A.6.8 Start of production

Having successfully completed the acceptance testing, the financial institution can begin the migration. This must be done by arrangement with the Operations Center and allowing for the usual lead time for mutations.
Section B  Messages

Unless otherwise stated, the messages described can be used for both SIC (CHF) and euroSIC (EUR).

SIX Interbank Clearing decides on the basis of the fields that are completed in a SWIFT message into which SIC/euroSIC message it should be converted. This is why different types of SIC/euroSIC payment can be handled with one SWIFT message type, and these are each explained in their own section.

To help you find the right section, the title gives both the SWIFT message type and the corresponding SIC/euroSIC message type and the type of payment.

For each message, the relevant SWIFT fields for SIC or euroSIC are shown in a table with the field name and SIC status. The given SIC status may be different from the SWIFT status of the corresponding field. The following are possible:

- M = Mandatory
- O = Optional
- C = Conditional (i.e. mandatory in certain cases)
B.1 Special features of payments

B.1.1 Acknowledgement

The sending bank only receives acknowledgement messages if a transaction was rejected.

B.1.2 Identifying the beneficiary bank

A sending bank defines which beneficiary bank in SIC/euroSIC is to receive the credit by filling in the SWIFT fields 56a-58a. The beneficiary bank (B-Bank) is identified as follows:

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identifi-</td>
<td>1. It must be possible to identify the B-Bank from the first SWIFT field that is used (56a-58a). Otherwise the transaction will be rejected.</td>
</tr>
<tr>
<td>cation of</td>
<td>2. If, in the first SWIFT field that is used, both the values &quot;Identifier Code&quot; and &quot;Party Identifier&quot; are used for Option &quot;A&quot;, the value from &quot;Party Identifier&quot; is ignored.</td>
</tr>
<tr>
<td>the B-</td>
<td>3. Values in the &quot;Location&quot; or &quot;Name &amp; Address&quot; fields are ignored.</td>
</tr>
<tr>
<td>Bank</td>
<td>4. The &quot;Party Identifier&quot; field should be filled in with the 6-character SIC no. as shown in the BC Bank Master Data.</td>
</tr>
</tbody>
</table>

B.1.3 Priority

Payments can be given priority codes. Payments with higher priorities will be processed first. This is important, for example, if payments have to be made which bypass a queue. For details on priority codes, Section E.

B.1.4 Transaction Reference Number (SWIFT field 20)

A transaction reference number can only be assigned once within an eight day period (two days in the past, the present value date and five pre-valued days).

B.1.5 Bank-to-Bank Information (SWIFT field 72)

If several SIC fields which have to be converted into SWIFT field .72 contain the maximum amount of data, the data cannot always be supplied in full online.

\(^1\) Applies to customer-to-bank and bank-to-bank payments
### B.1.6 Value date fields

A participant prescribes a value date (SWIFT 32A) for outgoing payments; the SIC/euroSIC system, on the other hand, uses the "Target value date"\(^2\) and "Settlement date"\(^3\) fields.

The contents of these fields may be different, for details please see the SIC/euroSIC User Manual, section B1, paragraph "Setting the settlement date".

When a settled payment is being delivered to the beneficiary bank, the following therefore applies to all SWIFT messages:

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Header in FIN, Message User Reference; Feld 108 (Optional Message User Reference)</td>
<td>The settlement date and settlement time are shown using the following code words: Settlement date = Code &quot;A&quot; plus date in the form (YYMMDD) Settlement time = Code &quot;T&quot; plus time in the form (HHMMSS)</td>
</tr>
<tr>
<td>32A</td>
<td>The required value date from the original message is transferred into SWIFT field 32A.</td>
</tr>
</tbody>
</table>

### B.1.7 MT202COV/B12 (cover payments)

Banks can send cover payments via SWIFT MT202COV/B12 to SIC and euroSIC. These messages are also sent out as MT202COV/B12 to those banks that are connected via SWIFT. For SIC/euroSIC Interface banks, they are sent out as MT B12 "Extended covering funds (cover payment)" (see also SIC/euroSIC User Manual).
B.2 STP

For details about STP payments in SIC/euroSIC, please see the "STP-Guide" produced by the working group on STP in payment transactions, reporting to the Payment Committee Switzerland.

Comments on individual fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>56a</td>
<td>In the Party Identifier an IBAN (CH or LI) counts as an STP feature.</td>
</tr>
<tr>
<td>57a</td>
<td>In the Party Identifier an IBAN (CH or LI) counts as an STP feature.</td>
</tr>
</tbody>
</table>
| 59a   | 1. The IBAN (CH or LI) counts as an STP feature. 
       | 2. The 27-character ES reference number from the encoding line on the red "ES Bank" counts as an STP feature. 
       | 3. The postal account number only counts as an STP feature if the transaction is not sent directly to a bank. |

72 Use of this field is a non-STP feature. Excluded from this are transactions with remoteGATE codes (see Section E).

An MT103/A10 counts as STP provided that the following conditions are met:

Comments on individual fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>59a</td>
<td>Contains the ES reference number or IBAN or alternatively the postal account number of the beneficiary.</td>
</tr>
</tbody>
</table>

72 Contains only remoteGATE codes.

An MT103/A11 counts as STP provided that the following conditions are met:

Comments on individual fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>57a</td>
<td>Where a Party Identifier is used, an IBAN (CH or LI) is given.</td>
</tr>
<tr>
<td>59a</td>
<td>In the account, an IBAN (CH or LI) is given or alternatively the postal account number of the beneficiary.</td>
</tr>
</tbody>
</table>

72 1. Contains only remoteGATE codes. 
2. Returns (code/SICAVIS/9) in SWIFT field 72 count as STP.

An MT103/A15 counts always as STP.

---

4 Only recommended for payments under section B.3.3.2.
5 The postal account number only counts as an STP feature if the transaction is not sent directly to a bank. That is why this is only recommended for payments under section B.3.3.2.
MT103/A10 is used for processing bank bulk payment transactions. This payment can be automatically processed by the beneficiary's bank provided that it is sent with a valid account number and the necessary data about the beneficiary.

The following cases where MT103/A10 may be used are explained in this section and demonstrated with examples:

- STP payment without deposit slip (see B.3.1)
- Non-STP payment with red deposit slip (see B.3.2)
- STP payment with red deposit slip (see B.3.3)
- STP payment with International Payment Instruction (IPI) (see B.3.4)
- Payment instruction (see B.3.5)

For a SIC/euroSIC A10 customer payment, only the following fields on the MT103 SWIFT message should be completed:

<table>
<thead>
<tr>
<th>SWIFT field ID</th>
<th>SWIFT field name</th>
<th>SIC status</th>
</tr>
</thead>

</tr>
</tbody>
</table>
B.3.1 STP customer payment

This use of SWIFT MT103/A10 applies to processing customer payments made into a bank account with no accompanying deposit slip.

B.3.1.1 Example: STP customer payment

The Remote Bank Frankfurt transfers CHF 250,000 on behalf of the watch wholesaler to the account of the Horlogerie de Joux at the Banque Commerciale, Fribourg. Since the payment complies with the requirements of the Swiss STP definition, the transaction counts as STP.

Example: STP payment with red deposit slip with IBAN

The Banque Commerciale receives from M. Beispieler a red deposit slip (ES) to pay an invoice for CHF 8479.25 payable to Muster AG into their account at the Seldwyla Bank. Since the IBAN is quoted, the transaction counts as an STP payment.

### Field | Designation | Content
---|---|---
Sender | BACOCHFR |
Receiver | TKZHCHZZ |
20 | Sender’s Reference | k89esi |
23B | Bank Operation Code | CRED |

</tbody>
</table>
B.4 SWIFT MT103/A11: Extended customer payment

In principle, MT103/A11 is like MT103/A10 (see section B.3); the additional fields are all optional and mainly intended for more complex situations where money is being forwarded.

The following cases where MT103/A11 may be used are explained in this section and demonstrated with examples:

- STP payment using a multiple beneficiaries structure (see B.4.1)
- Non-STP payment with euroES or euroESR of PostFinance (see B.4.2)
- Cross-border customer payment (see B.4.4)

For an A11 SIC/euroSIC customer payment, the following fields of the MT103 SWIFT message can be filled in:

<table>
<thead>
<tr>
<th>SWIFT field ID</th>
<th>SWIFT field name</th>
<th>SIC status</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Sender's Reference</td>
<td>M</td>
</tr>
<tr>
<td>23B</td>
<td>Bank Operation Code</td>
<td>M</td>
</tr>
<tr>
<td>23E</td>
<td>Instruction Code</td>
<td>O</td>
</tr>
<tr>
<td>26T</td>
<td>Transaction Type Code</td>
<td>O</td>
</tr>
<tr>
<td>32A</td>
<td>Value Date/Currency/Interbank Settled Amount</td>
<td>M</td>
</tr>
<tr>
<td>32B</td>
<td>Currency/Instructed Amount</td>
<td>O</td>
</tr>
<tr>
<td>36</td>
<td>Exchange rate</td>
<td>O</td>
</tr>
<tr>
<td>50a</td>
<td>Ordering Customer</td>
<td>M</td>
</tr>
<tr>
<td>52a</td>
<td>Ordering Institution</td>
<td>O</td>
</tr>
<tr>
<td>56a</td>
<td>Intermediary</td>
<td>O</td>
</tr>
<tr>
<td>57a</td>
<td>Account With Institution</td>
<td>M</td>
</tr>
<tr>
<td>59a</td>
<td>Beneficiary Customer</td>
<td>M</td>
</tr>
<tr>
<td>70</td>
<td>Remittance Information</td>
<td>O</td>
</tr>
<tr>
<td>71A</td>
<td>Details of Charges</td>
<td>O</td>
</tr>
<tr>
<td>71F</td>
<td>Sender's Charges</td>
<td>O</td>
</tr>
<tr>
<td>72</td>
<td>Sender to Receiver Information</td>
<td>O</td>
</tr>
</tbody>
</table>

SIX Interbank Clearing decides on the basis of the fields that are filled in the MT103 SWIFT message whether this should be converted in SIC/euroSIC as an A11 extended customer payment or an A10 customer payment.

Comments on individual fields:

\(^7\) The deposit slip always results in a non-STP payment
B.4.3 SEPA credit transfers

By means of MT103/A11, euroSIC participants can send SEPA credit transfers. The outgoing SEPA credit transfers will be converted by euroSIC to a FIToFICustomerCredit-Transfer in accordance with SWIFT MX Standard (pacs.008.001.01) and forwarded via SECB. Details about SEPA transfers can be found in the Handbook for financial institutions for participation in the SEPA Direct Debit Scheme.

B.4.4 Non-SEPA credit transfers

Payments to financial institutions outside euroSIC are forwarded by SECB Swiss Euro Clearing Bank GmbH.

- The routing to the SECB is done by specifying the BIC of SECB (SECGDEFF) in the SWIFT field 56A by the A-Bank or automatically during the conversion. The second variant occurs, if the payment is addressed to a bank, which is not participating in euroSIC. These payments will be automatically sent to the SECB.
- By using appropriate codes or filling in the appropriate fields, the A-Bank can forward payments to the German electronic bulk payment system EMZ. Details are available on demand from the SECB.
**B.5 Returning a payment**

Customer payments which cannot be credited to a beneficiary because of incomplete, incorrect or unrecognised information must be returned to the financial institution of the ordering party. The process is governed by Appendix I-8 "Return of payments that cannot be processed in SIC/euroSIC" of the Technical Rules and Regulations. It is essential that the beneficiary's bank returns such payments according to this system.

The following cases where MT103/A11 may be used are explained in this section and demonstrated with examples:

- Return of payments that cannot be processed in SIC/euroSIC (see B.5.1.3)
- Return of ESR payments that cannot be processed in SIC/euroSIC (see B.5.1.6)
- Return of incoming payments via SECB that cannot be processed in euroSIC (see B.5.1.7)

B.5.2 SEPA returns

SEPA credit transfers which cannot be credited to a beneficiary because of incomplete, incorrect or unrecognized information must be returned to the financial institution of the ordering party. The process is governed by Appendix I-8 "Return of payments that cannot be processed in SIC/euroSIC" of the Technical Rules and Regulations and the Handbook for financial institutions for participation in the SEPA Direct Debit Scheme for euroSIC. It is essential that euroSIC participants return SEPA payments using this process.
B.6 **SWIFT MT103/A15: VESR payment**

MT103/A15 is used to process payments resulting from the VESR procedure (*Verfahren Einzahlungs-Schein mit Referenznummer* = procedure for deposit slip with reference number). This is based on the orange ESRs or ESR⁺ using layout code 609, which are given by the creditor to their debtors. Where the ESR participant number is that of an SIC participant, and this participant number is entered in the BC segment, the payment is forwarded in the SIC platform directly to the corresponding SIC participant.

PostFinance has three ways of structuring participant and reference numbers (5/15, 9/16, 9/27). The banks use only ESR version 9/27.

Charges can also be entered in the MT103/A15 (including in favor of PostFinance).

The following cases where MT103/A15 may be used are explained in this section and demonstrated with examples:
- Customer payment with orange deposit slip

For an MT103/A15 payment, the following fields may be filled in:

<table>
<thead>
<tr>
<th>SWIFT field ID</th>
<th>SWIFT field name</th>
<th>SIC status</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Sender’s Reference</td>
<td>M</td>
</tr>
<tr>
<td>23B</td>
<td>Bank Operation Code</td>
<td>M</td>
</tr>
<tr>
<td>32A</td>
<td>Value Date/Currency/Interbank Settled Amount</td>
<td>M</td>
</tr>
<tr>
<td>33B</td>
<td>Currency/Instructed Amount</td>
<td>O</td>
</tr>
<tr>
<td>36</td>
<td>Exchange Rate</td>
<td>O</td>
</tr>
<tr>
<td>57a</td>
<td>Account With Institution</td>
<td>M</td>
</tr>
<tr>
<td>59a</td>
<td>Beneficiary Customer</td>
<td>M</td>
</tr>
<tr>
<td>70</td>
<td>Remittance Information</td>
<td>M</td>
</tr>
<tr>
<td>71A</td>
<td>Details of Charges</td>
<td>O</td>
</tr>
<tr>
<td>71F</td>
<td>Sender’s Charges</td>
<td>O</td>
</tr>
<tr>
<td>72</td>
<td>Sender to Receiver Information</td>
<td>C</td>
</tr>
</tbody>
</table>

If the fields needed to process the payment as MT103/A15 are not there or are incomplete, the payments are converted in SIC/euroSIC as an A10 or A11 customer payment. It is to be expected that these incorrectly issued payments will be returned by the beneficiary bank.

For details on ESR payment slips, please refer to the Technical Rules and Regulations, Appendix I-2 and to the Design Guidelines from PostFinance (441.03). If a financial institution would like to enable its customers to use ESR slips for incoming payments, this must be agreed with PostFinance in advance. It is also recommended that you carry out an acceptance test of the forms with PostFinance.
B.6.1 Customer payment with orange deposit slip

This use of SWIFT MT103/A15 applies to processing customer payments with orange ESRs or ESR® with layout code 609 (only possible in SIC).

B.6.2  ESR payment received from customer using MT103/A15

This example of the use of SWIFT MT103/A15 shows the receipt of customer payments with an orange ESR or ESR* with layout code 609 (only possible in SIC).

Where the ESR reference number is used, the "Account Number" in field 59a is not the account number of the beneficiary. Here the ESR participant number of the beneficiary's bank is shown. The beneficiary himself is entered in the ESR reference number in field 70.

### B.7 SWIFT MT202/B10: Balancing payment

MT202/B10 is used only for balancing payments between clearing banks. The beneficiary bank can recognize the original transaction from the remoteGATE code /SICPTCOD/ and the SIC payment code, which must be sent at the same time.

<table>
<thead>
<tr>
<th>SWIFT field ID</th>

<tbody>
<tr>
<td>21</td>
<td>Must be there in the case of a conformity payment (3rd position of the payment code = 1 or =3 respectively). Either field 21 or field 72 with /REFORD must be there, or both fields may be there.</td>
</tr>
<tr>
<td>32A</td>
<td>On the subject of valuation see also section A4.2/A4.3 of the SIC/euroSIC User Manual.</td>
</tr>
</tbody>
</table>
| 72    | remoteGATE Code /SICPTCOD/ plus 3-character SIC payment code. If it is necessary for settlement to be on the same value date between clearing stop 1 and clearing stop 2, this is only defined by the payment code. SIC payment codes can be seen in section D4 of the SIC/euroSIC User Manual. Optionally possible: /REFORD/ and reference number (max. 16 characters) One of field 21 or field 72 with /REFORD must be there, or both fields may be there. In the case of ESR credit notes (payment code 712), the ordering party reference number is structured as follows: BYYMMDDKKKKKKKKK, where:  
  - B = type of entry (B = EGA-B, V = EGA-V, E = ESR)  
  - YYMMD = Value date  
  - KKKKKKKKKK = Account number |
B.7.1 Example: Balancing payment after clearing stop 1

The Banque Commerciale, Fribourg transfers CHF 500,000 to the Remote Bank Hanover. This means that payments by the Remote Bank that have not yet been settled because of a shortage of funds can still be settled between clearing stop 1 and clearing stop 2.

Comments on individual fields:

- **Field 58A**: Where payments arrive following the daily sight deposit transactions, in SIC the system manager (SNB) is entered instead of the SIC participant.

- **Field 72**: If possible only enter remoteGATE code /SICPRIO/ (see Section E). Where payments arrive following the daily sight deposit transactions, in euroSIC the text ".INS/and the BIC of the euroSIC participant" and the text ".REC/BALANCE TRANSFER" are entered.

**B.8.1 Example: Bank-to-bank payment**

The Remote Bank, Frankfurt (SWIFT BIC REMODEFF) transfers CHF 1,000,000 to its account with the Schweizerische Bank, Zurich (SWIFT BIC SCHBCHZH).

</table>
B.9.1 Example: cover payment

The Remote Bank, Frankfurt (SWIFT BIC REMODEFF) sent an MT103 directly to the Banque de Commerce in Brussels (SWIFT BIC BACOBRBE). The Schweizerische Bank is the CHF correspondent of the Banca Commerciale. So the Remote Bank sends a cover payment MT202COV to the Schweizerische Bank, Zurich (SWIFT BIC SCHBCHZH).

B.9.2 Cross-border bank-to-bank payment

Payments to financial institutions outside euroSIC are forwarded by SECB Swiss Euro Clearing Bank GmbH.

- The routing to the SECB is done by specifying the BIC of SECB (SECGDEFF) in the SWIFT field 56A by the A-Bank or automatically during the conversion.
- The second variant occurs, if the payment is addressed to a bank, which is not participating in euroSIC. These payments will be automatically sent to the SECB.
- The specifications for cross-border bank-to-bank payments are contained in the document "Business rules for cross-border payments" of the SECB. The document is available on demand from the SECB.
B.10 SWIFT MTn92/H70: Cancelation of a payment

By using this type of message, individual payments in the waiting file (value date today or pre-value dated) can be canceled by the sender. MT103 must be canceled with MT192, MT202 with MT292.

- Banks can only present cancelations of payments with "value date today" until clearing stop 2.
- Only payments in the waiting file (value date today or pre-value dated) can be canceled. Payments that have already been settled can no longer be canceled.
- MT104/D10 direct debits cannot be canceled with MT192/H70.
- SIX Interbank Clearing performs no manual interventions. It is therefore essential that the information is correct. If a reference cannot be traced, the cancelation will not be carried out.
- It is possible to check online to find out whether a cancelation was successful.

</tbody>
</table>

Original Message (OSMG):
Field 32A of the original message must be there in full; the OSMG field must begin with ":32A".

Note:
Depending on the application, (e.g. with SWIFT Alliance) the data from the "original message" may have to be entered in a separate field.

B.10.1 Banks with a SIC/euroSIC platform interface

For SIC/euroSIC participants with a SIC/euroSIC platform interface who send SWIFT FIN (e.g. MT202COV) to SIC/euroSIC, the following applies:

Incorrect SWIFT-FIN transactions can, alternatively, also be canceled using SIC message H70.
B.10.2 Example: Cancelation of a customer payment

The Remote Bank, Frankfurt presented the following payment order to the SIC system and shortly afterwards wants to cancel the payment.

Customer payment SWIFT MT103/A10 to be canceled:

</tbody>
</table>

If error message: NOK-FROM-SIC-CHF or NOK-FROM-SIC-EUR

<table>
<thead>
<tr>
<th>Field</th>
<th>Comment/content</th>
</tr>
</thead>
<tbody>
<tr>
<td>76</td>
<td>Fix text: &quot;SIC-ERROR-CODE&quot; plus error code and indication of the SIC field in which the error occurred. This information is shown in the format eee:fff (3-character SIC error code, SIC field number). Details on SIC fields and on the corresponding SWIFT fields can be found in Section C. Example: SIC ERROR CODE 178:40S</td>
</tr>
</tbody>
</table>
B.11.1 Example: NOK message wrong Sender’s Reference

The Remote Bank, Frankfurt sends two MT103/A10 with the same Sender’s Reference. The second payment is rejected in the course of conversion.

The error code 103:20 tells us that the content of SWIFT field 20 is invalid (Code 103). A reference can only occur once within the permitted value dates (5 days pre-value date, today and 2 days in the past).

<table>
<thead>
<tr>
<th>Field</th>
<th>Designation</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

<td>Related Reference</td>
<td>k84cmt</td>
</tr>
<tr>
<td>76</td>
<td>Answers</td>
<td>SGW ERROR CODE 103:20</td>
</tr>
</tbody>
</table>

B.11.2 Example: NOK message wrong value date

The Remote Bank, Frankfurt sends an MT103/A10 with an incorrect value date.

The error code 103:16 tells us that the content of SIC field 16 (intended value date) is invalid (Code 103).

<table>
<thead>
<tr>
<th>Field</th>
<th>Designation</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sender</td>
<td>REMODEFF</td>
</tr>
<tr>
<td></td>
<td>Receiver</td>
<td>TKZHCHZZ</td>
</tr>
<tr>

<td>Transaction Reference</td>
<td>NOK-FROM-SIC-CHF</td>
</tr>
<tr>
<td>21</td>
<td>Related Reference</td>
<td>k84cmt</td>
</tr>
<tr>
<td>76</td>
<td>Answers</td>
<td>SIC ERROR CODE 103:16</td>
</tr>
</tbody>
</table>

B.11.3 Example: NOK message wrong BC number

The Remote Bank, Frankfurt sends an MT103/A10 giving only the name of the beneficiary’s bank in 57D. The beneficiary bank cannot be correctly identified, so the payment is rejected in the course of conversion. The error code 103:18 tells us that SIC field 18 (corresponds in this case to SWIFT field 57a) could not be filled in correctly and so the content of the field is invalid (Code 103).

<table>

B.12.1 Example: Cancelation log
B.13 SWIFT MT299/N20: Clearing closing time message

At the beginning of the clearing day, this message notifies all users of the closing time for that clearing day, and the expected times of clearing stop 2 and clearing stop 3. It is also confirmation that the previous clearing day, including day-end processing/daily start-up processing, was successfully completed.

If clearing stop 1 is postponed, the same message is sent to all users. If the expected times for clearing stops 2 and 3 are postponed, the message is sent giving the new information about the expected times.

The message is sent on the afternoon or evening of the previous calendar day, for SIC approx. 16.30, for euroSIC approx. 18.30. The times may vary.

B.13.1 Banks with a SIC/euroSIC platform Interface

For SIC/euroSIC participants with a SIC/euroSIC platform interface who obtain an MT950 instead of the SIC message L80, the following applies:

Instead of the SIC N21 message, the MT299/N21 message is sent.

B.13.2 Example: Clearing closing time message

At the start of clearing day 18 November 2005 the Banque Commerciale receives the following MT299/N20 with new clearing stop times for the euroSIC system.

<table>

B.15 SWIFT MT950: Recapitulation SIC/euroSIC

After day-end processing, SIX Interbank Clearing sends an MT950 (Statement Message) to participating banks. If the data cannot be put in a single MT950, then so-called chaining takes place. As an aid in reconciliation, the MT950 supplements the MT950 statement sent by the system manager which contains the initial and final balances of the settlement account in question and the accumulated sums per service.

<table>
<thead>
<tr>
<th>SWIFT field ID</th>
<th>SWIFT field name</th>

</tr>
<tr>
<td>62a</td>
<td>Closing Balance (Booked Funds)</td>
</tr>
</tbody>
</table>

Comments on individual fields:

Field | Comment/content
--- | ---
20 | Where two or more MT950s are chained together, either the same TRN or different ones can be used. The TRN for SIC begins with "CHL", that for euroSIC with "EUL".
25 | Contains the settlement account number (=5 digit BC number plus "0"). The settlement account number is the same for SIC and euroSIC.
28C | This field contains:
| a) | the current day number
| b) | the current page number
60a | The balance is always zero. The balance of the sight deposit account (which generally corresponds to the balance before day-end) is recorded as a credit by the system manager (SNB/SECB).
61 | Details of payments. The mandatory sub-fields 1 (value date), 3 (debit/credit), 5 (amount), 6 (transaction type identification code) and 7 (transaction reference) are used. Followed by separators "//" and details of the services. The transaction reference is generated by the preceding systems. It contains no detailed information about particular transactions (e.g. information about the underlying transaction).

| Payments resulting from the SIC system |
| Payments resulting from the euroSIC system |
| Payments resulting from the Eurex Repo Platform of Eurex Zürich Ltd via the SECOM Clearing and Settlement Platform of SIX SIS Ltd |
| Payments resulting from the SECOM Clearing and Settlement Platform of SIX SIS Ltd |
| Payments resulting from the Eurex Platform of Eurex Frankfurt AG via SECOM Clearing and Settlement Platform of SIX SIS Ltd |
| Payments resulting from the Swiss National Bank to cover debit balances or to operate sight deposit accounts for cash payments |
| Transactions resulting from the national direct debit procedure (MT103/Axx with code /AUTH/ in field 72) |
| Payments resulting from the Swiss Bancomat (ATM) service |
| Payments resulting from point-of-sale payments |
### SWIFT MT950: Recapitulation SIC/euroSIC

Section C  Direct debit procedure

This section is intended for financial institutions which take part in the Swiss direct debit procedures LSV+/BDD.

The following situations are explained in this section and clarified using examples:

1. Direct debits
   • Presentation of direct debits with ESR reference number (see C.2.1)
   • Presentation of direct debits with IPI reference number (see C.2.2)
   • Arrival of direct debits with ESR reference number (see C.3.1)
   • Arrival of direct debits with IPI reference number (see C.3.2)

2. Payments
   • Payment of a direct debit with ESR reference number (see C.4.1)
   • Payment of a direct debit with IPI reference number (see C.4.2)
   • Arrival of a paid direct debit with ESR reference number (see C.5.1)
   • Arrival of a paid direct debit with IPI reference number (see C.5.2)

3. Special situations
   • Reverse routing via SWIFT MT190 incl. cover payment (see C.6)
   • List messages from LSV+ (see C.7, C.8 and C.9)
C.1 Start of LSV⁺/BDD operation

The LSV⁺/BDD operation can start about four weeks after starting to use SIC/euroSIC. Details on LSV⁺/BDD are available on the Extranet in the LSV⁺/BDD Guidelines for financial institutions.

C.1.1 General

The Swiss direct debit procedures LSV⁺ and BDD are different from the national procedures of other countries. For example, direct debit instructions from the creditor's bank are not credited in advance on presentation, but rather the presentation of direct debits is to be regarded as a "Request for Credit". The direct debit is redeemed by the debtor's bank. The latter makes a single payment which is credited to the creditor's bank on the due date in the relevant SIC/euroSIC settlement account. If a direct debit is not redeemed, no message is sent to the creditor's bank. Details on the procedure can be seen in the LSV⁺/BDD Guidelines for financial institutions.

C.1.2 Requirements LSV⁺/BDD

The following conditions are required:
- Productive SIC/euroSIC connection
- Service agreement LSV⁺/BDD
- MUG MT104 Registration with SWIFT
- Test procedure completed and authorization from SIX Interbank Clearing
- Productive access to Web Application, the "LSV⁺/BDD orders" module and the "LSV⁺/BDD master data CR" module.

C.1.3 Debtor's bank

The following documents are to be provided by the financial institution:

<table>
<thead>
<tr>
<th>Form (LSV⁺/BDD)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service agreement LSV⁺/BDD</td>
</tr>
<tr>
<td>Online form: LSV⁺ - Financial Institution</td>
</tr>
<tr>
<td>Online form: Test direct debit LSV⁺/BDD DEB-FI</td>
</tr>
</tbody>
</table>

C.1.4 SWIFT MT104 Message User Group (MUG)

Participants in LSV⁺/BDD who are acting as the debtor's bank receive direct debits as MT104/D10. Financial institutions must register at www.swift.com to participate in the Message User Group MT104.
C.1.5 Tests before production starts

New participants must carry out an acceptance test which can be done after commencing operations in SIC/euroSIC. Details about the test process are also described in section 2.12 of the LSV+/BDD Guidelines for financial institutions. It is not possible to begin productive operation without successfully completing the acceptance test. Details about the tests can be found in Section F.

C.1.6 Creditor's bank

The financial institution receives collection orders from its customers (creditors) through its own banking channels (e.g. e-banking) and presents them to SIX Interbank Clearing as MT104/D10s. The rules of the Swiss direct debit procedure apply (see LSV+/BDD Guidelines for financial institutions). Financial institutions acting as the bank for the creditor should also carry out an additional acceptance test with SIX Interbank Clearing. This allows the whole process to be tested. Details of the test can be found in Section F.

It is also possible for customers of the financial institution to present direct debits to SIX Interbank Clearing online via payCOMweb. The specifications for this can be found in the Guidelines for creditors. If a bank wants to act as the bank for the creditor, it is recommended that they contact Product Management at SIX Interbank Clearing on telephone number +41 58 399 4747 or by email to pm@six-group.com.

In addition to C.1.3, the following documents should also be supplied by the financial institution:

Form (LSV+/BDD)

| Online form: LSV+ - Financial Institution |
| Online form: Test direct debit LSV+/BDD CR-FI |

The creditor's bank always also acts as the debtor's bank.

C.1.7 Limits

The creditor's bank must have agreed an appropriate daily limit. For details see LSV+/BDD Guidelines for financial institutions, section 2.4.4.

C.1.8 Debit authorization and LSV ID

The creditor's bank must give its creditors an LSV identification. This five-character identification is administered by SIX Interbank Clearing and can be ordered by the financial institution via Web Application, "LSV+/BDD master data CR" module.
C.1.9 Reference numbers

The reference number used in the "Direct Debit Reference" field must be either the 27-character reference number in ESR format or the 20-character reference number as used for the structured IPI remittance information. The creditor's bank tells the creditor which type of reference number must be used. Details on reference numbers are to be found in the Guidelines for creditors, appendix A 6.

C.1.10 Cancelation of direct debits

MT104/D10 cannot be canceled using MT192/H70.

C.1.11 Returns

The process for sending returns by SWIFT to the creditor's bank is described in section 2.7.2 of the LSV+/BDD Guidelines for financial institutions. Examples can be found in section C.6 of this Handbook. A request for a return is settled by a bank-to-bank payment.
MT104/D10 is used to send direct debit orders from the bank of the beneficiary to SIC/euroSIC. The process for acceptance of direct debits by the debtor's bank is also based on MT104/D10. There is no settlement in SIC/euroSIC on the basis of MT104/D10. Direct debits can only be sent as individual instructions. A multiple MT104 is not possible.

The following cases where MT104/D10 may be used are explained in this section and demonstrated with examples:

- Direct debit with ESR reference number (see C.2.2)
- Direct debit with IPI reference number (see C.2.1)

<table>

</tr>
</tbody>
</table>

Other optional fields in MT104 that are not listed in this table will be disregarded.

C.2.1 Variant 1: Direct debit with ESR reference number

This variant is based on the reference number from the orange deposit slip. The LSV reference number in ESR format has 27 characters and is numerical. The last position is occupied by a test digit which is calculated according to the test digit procedure Modulo 10, recursively. The data in the freely configurable remaining 26 positions of the ESR reference number (giving customer ID, invoice number, debtor number, date, period etc.) is defined by the creditor's bank.

If the ESR reference number is used, the 9-character ESR participant number of the creditor's bank is also required.

Unlike the situation with direct debits with IPI reference numbers (see C.2.1) the information about the creditor and the debtor (name/account number) are not sent back in the payment advice. See also C.4.1 and B.6.1.

<td>C</td>
<td>Currency and Settlement Amount</td>
<td>CHF850,</td>
</tr>
</tbody>
</table>
C.2.2 Variant 2: Direct debit with IPI reference number

This variant is based on the reference number from the IPI (International Payment Instruction, see B.3.4). The reference number used for the structured IPI remittance information has 20 characters and is alphanumerical. The first two positions are occupied by a test digit which is calculated using the test digit procedure Modulo 97-10. The data in the remaining freely configurable 18 positions of the structured IPI remittance information (including invoice number, debtor number, date, period, etc.) can be selected by the creditor. Swiss or Liechtenstein IBANs must be used.

Unlike the situation with direct debits with ESR reference numbers (see C.2.1) the details about the creditor and debtor (name/account number) are sent back with the payment advice. See here also C.4.2 and B.3.4.

C.3 Arrival of a direct debit

This example of the use of the SWIFT MT104/D10 relates to the arrival of direct debit instructions at the debtor's bank. One MT104/D10 is sent for each direct debit. There is no settlement in SIC/euroSIC on the basis of MT104/D10. The direct debit instruction is subsequently paid by the debtor's bank via MT103/A10 (see B.3) or MT103/A15 (see B.6).

The following cases are explained in this section and demonstrated with examples:
- Arrival of a direct debit with ESR reference number (see C.3.1)
- Arrival of a direct debit with IPI reference number (see C.3.2)

Payment of a direct debit

This example deals with the payment of direct debit instructions which the debtor’s bank has received via MT104/D10. A direct debit instruction is always paid by the debtor’s bank via MT103/A10 (see B.3) or MT103/A15 (see B.6).

One payment must be made for each direct debit, this must be paid on the required processing date. The date of payment must never be more than two banking days after the "Requested Execution Date". Otherwise the payment will be rejected.

The following cases are explained in this section and demonstrated with examples:
- Payment of a direct debit with ESR reference number (see C.4.1)
- Payment of a direct debit with IPI reference number (see C.4.2)

C.4.1 SWIFT MT103/A15: Payment of a direct debit with ESR reference number

Direct debit instructions which a bank has received as MT104/D10 with the ESR reference in field 21D must be processed according to this example. The table below gives advice about which fields in the MT104/D10 can be used to fill in the fields on the MT103/A15.

Unlike with payments with IPI reference numbers (see C.4.2) it is not possible to provide details of customer data (e.g. name/IBAN of the debtor/creditor). The "Account" of the creditor is the ESR participant number of the creditor's financial institution. It is not possible to give any details about the customer (account/name). See also B.6.1.

C.5 Arrival of a paid direct debit

Payment of a direct debit instruction is made on the required processing date (in exceptional cases up to max. two banking days later) by the debtor’s bank. For each direct debit that is presented, the creditor’s bank receives an MT103/A10 or MT103/A15.

The following cases are explained in this section and demonstrated with examples:
- Arrival of a paid direct debit with ESR reference number (see C.5.1)
- Arrival of a paid direct debit with IPI reference number (see C.5.2)

C.5.1 Arrival of a paid direct debit with ESR reference number

This example of the use of SWIFT MT103/A15 shows the arrival of customer payments on the basis of a direct debit with ESR reference number.

Instructions based on a direct debit with ESR reference number can be distinguished from those based on an ESR deposit slip (see B.6.2) by the codeword /ESR/ and the fact that field 72 is filled in.

Unlike payments with IPI reference numbers (see C.4.2) no customer data (e.g. name/IBAN of the debtor/beneficiary) is shown.

The "Account" of the creditor is the ESR participant number of the creditor’s financial institution. See also B.6.1 and C.4.1.

C.6.2 MT202/B10: Payment of a return debit note

The MT202/B10 is also used for balancing payments based on return debit notes. From the remoteGATE code /SICPTCOD/ and the SIC payment code 021, which must be supplied, the beneficiary bank recognizes that the cause was a return debit note which it sent.

C.8 SWIFT MT996/L88: Recapitulation for the creditor’s bank

Those financial institutions which take part in LSV+ as creditor’s banks receive the list message MT996/L88. This is a summary list of all direct debit notes delivered to LSV+, or canceled, on the processing date, from the bank’s own creditor, sorted by BC number, account number of the creditor and LSV-ID (payment group).

A separate MT996 is sent for each payment group. An MT996/L88, giving the overall total of deliveries, marks the end. This last MT996/L88 contains "999999" as the BC number of the creditor's bank and "Total CR deliveries" as the account number of the creditor.

A message giving the overall total is also sent if there were no deliveries/cancelations. In this case the values in lines 6-17 of field 7&A are zero values.

The MT996/L88 messages with field 77A are sent first, then come the MT996/L88 messages with field 79.

C.8.3 Variant 2: Delivery by the creditor

If customers of the creditor bank present direct debits using payCOM\textsuperscript{web}, the bank receives a recapitulation list showing this category of presentation. The list can easily be distinguished from the recapitulation list in C.8.1.

C.9 SWIFT MT196/L58: Cancelation log for the creditor’s bank

This message is used to report the direct debits that have been canceled on that processing day to the creditor's bank. The list is only relevant to banks which take part in LSV+/BDD as the creditor's bank.

One MT196/L58 is sent for each cancelation which took place on the previous clearing day.

C.9.1 Variant 1: Automatic cancelation of MT104/D10

In some cases it can happen that direct debits are accepted when they are presented, but cannot be delivered to the debtor's bank. If the latter is no longer participating in LSV+/BDD by the date for payment, those direct debit notes will be automatically canceled.

Section D  SIC – SWIFT cross-reference list

The following cross-reference list shows which SIC fields (both SIC and euroSIC) are assigned to which SWIFT fields.

This cross-reference table may be of assistance in the event of error messages, because they always refer to SIC fields. It makes it easier to find the errors in the corresponding SWIFT message.

</table>
Section F  Backup procedure

This section describes the guidelines for processing payments for participants in the following cases:

- breakdowns at individual banks
- breakdown at SIX Interbank Clearing Ltd.

F.1  Breakdowns at individual banks

The term "breakdown" refers to a situation in which a bank can no longer execute payment processing via SWIFT. The cause of the breakdown is irrelevant in reference to the applicable measures. The SIC platform concept provides for an integral backup system in addition to online operation around the clock. Each participant must be in a position to submit his payments electronically to SIC or euroSIC in case of breakdowns. This requires a backup solution that is ready to be used at any time (contractual obligation) and which must be provided for by a backup of the SWIFT infrastructure. Breakdowns at a SIC or euroSIC participant have the following effect:

- Outgoing payments can no longer be processed in full online
- Messages (e.g. inputs or NOK messages) can no longer be accepted online.

The sending bank must ensure that at least the payments of over 1 million CHF/EUR can be sent to the relevant organisation on the value date.

If the financial institution decides not to use backup media in SIC format, it should be able to handle payments via another participant, as a backup. In the case of interruptions where the end can be predicted and there is a need to clear significant volumes of traffic before clearing stop 1, it is possible to apply to the SNB or SECB for a postponement of the clearing stop, see SIC/euroSIC User Manual, section B 7.1.1.3 "Backup payment by the system manager".

F.1.1  Backup payments by the SNB

Individual payments

Note the following guidelines:

- The SNB will only record individual payments for the banks in case of a failing A-Bank backup option.
- The SNB will only execute backup payments starting at CHF 1 million.
- The payments must be delivered to the SNB Zürich, Zahlungsverkehr/SIC, as early as possible, continuously, either on paper or per fax with subsequent acknowledgement, or by means of a SWIFT MT299.
- The latest submission time is 2.00 pm.
- Payment entry in the SIC system must be completed before clearing stop 1.
• Submissions after 2.00 pm must be jointly agreed upon with the SNB. These back-up payments are executed exclusively by SIC-transaction B10 "Covering funds". The SNB enters only the fields required for this message type along with an A- and/or B-reference number.
• Details pertaining to the individual payments must be forwarded directly from the A-Bank to the B-Bank.

Global payments
SIC participants can also place global payments with the SNB. In exceptional situations (e.g. large volume of backup payments) the SNB can arrange or order that global payments are made.

Note the following guidelines:
• The SNB only executes global payments starting at CHF 1 million.
• The B-side amounts must be combined into a global payment per SIC settlement account.
• The payments must be delivered to the SNB Zürich, Zahlungsverkehr/SIC, as early as possible, continuously, either on paper or per fax with subsequent acknowledgement, or by means of a SWIFT MT299.
• Global payment reimbursements must occur according to the applicable technical rules and regulations.

F.1.2 Backup payments by the SECB
Submissions must be bilaterally agreed upon and reconciled with the SECB.

F.2 Breakdowns at SIX Interbank Clearing
Various alternative and backup procedures are set up to maintain operation of the SIC or euroSIC system in case of breakdown. The procedure used corresponds to the cause of the breakdown.

The following procedures are designated:
• **Backup computer center**: A second computer system is available in disaster recovery computer center (AWRZ), which serves as a replacement in case of hardware problems. Data is mirrored and maintained in both computer centers.
• **Restart from log file**: For disruptions originating from software problems (in applications, the database or operating system), which cannot be solved within a specific period of time (see also below, "Procedures for disruptions"), the disrupted day will be post-listed in a log file. Thereafter, processing occurs normally.
• **Restart**: The procedure is used if the "Restart from log file" cannot be used. The system is regenerated, without the data from the disrupted day, but otherwise with its complete range of function. The participant must resubmit the data from the disrupted day. In this case, SIX Interbank Clearing takes the data from its SWIFT application and transfers it to SIC/euroSIC. If necessary, a request can be submitted for messages to be sent again.
F.2.1 The miniSIC system

miniSIC is the normal instance SIC, with the limitation that the online communication (and thus all online functions, such as submission and delivery, queries, system manager control, etc.) and authentication are switched off and settlement of the payment instructions is made without coverage control.

With miniSIC the disrupted processing is traced (repeated) and the day concluded and the processing is carried out on the following days. miniSIC basically runs until the normal SIC instance is again completely operational.

In order to have miniSIC be fully operational as an alternative at any time, it must be tested regularly. Participation in miniSIC tests is therefore mandatory for all financial institutions. The system does not allow financial institutions with remoteGATE to meet certain requirements (e.g. presentation in SIC formats), so SIX Interbank Clearing takes over some of the tasks of those participants.

Each year at least one miniSIC parallel run is performed to ensure perfect operating conditions. Participation in these tests is mandatory for all SIC participants. This requirement is defined in the contract in which each SIC participant is obligated to be "backup capable" at any time. In all cases, the financial institution, as the contracting partner, is responsible for participating in miniSIC parallel runs.

Each SIC participant receives a fax from the SNB shortly before the beginning of the test run, containing relevant information on the exercise, with the value date which is to be repeated. The tasks of the participant for the miniSIC parallel run are carried out by SIX Interbank Clearing. If necessary, it can be requested that messages be sent again. In all cases, the financial institution, as the contracting partner, is responsible for the success of the miniSIC parallel run.

Please see also the Technical Rules and Regulations, section 2 for SIC and section 3 for euroSIC and section B 7 in the SIC/euroSIC User Manual.

F.2.2 Backup for delivery

If payments cannot be sent via SWIFT, then SIX Interbank Clearing sends out paper lists as a backup after day-end processing. Payments are sent when online operations resume. All participants should ensure processes are in place for selecting payments that are made late using a value date in the past.
Interleaf for paging in case of double-side printing.

16 Section in this Handbook for payments via SWIFT
Interleaf for paging in case of double-side printing.
Section H  CUG/MUG Registration

H.1  Registration in CUG

Registration in CUG is organised by SIX Interbank Clearing. The financial institution receives an email from SWIFT which must be acknowledged. Then SWIFT authorizes the financial institution for CUG.

H.2  Registration for MT104 MUG (only for LSV⁺/BDD participants)

Registration in MT104 MUG should be carried out by the financial institution as early as possible.

1. To register for the MT104 MUG please click www.swift.com and choose:
   Ordering & Support ⇒ Ordering ⇒ Existing customers ⇒ Messaging services
   ⇒ Change subscription ⇒ SWIFTNet FIN Service under the heading "Change subscription"

2. Click on "Message User Group"

3. Click on "Register for a Message User Group"

4. Click on "Message User Group Registration Request" and fill in the user name and password fields.

5. Please accept the SWIFT Ordering Tool terms and conditions.

6. Enter the details and select the options necessary to process the order:
   • 2.01: Ordering institution information:
     Your "live" BIC
   • 3.01: Preferred implementation date:
     Please choose the earliest possible date, which is the third weekend following the date of submission.
   • 4.01: Message type:
     Please enter your BIC Codes, as well as both the "live" and the "test & training" BIC.
   • 4.02: Add message type:
     Please select MT104 Request for direct debit.
   • 5.01: MT204 Sender information:
     Do not select this position ⇒ not needed.
